

NAME: RISHI BHARADWAJ

SRN: PES1UG24AM223

SCENARIO – 62

SE LAB – 02

Epic 1: Account Access & Organization Verification

Description: Enforce secure onboarding, authentication, and organizational verification for shelters and donors prior to granting access to the food claim board.

User Story	As a...	I want to...	So that...
Story 1.1: OAuth 2.0 Account Authentication	Platform User	Authenticate securely using OAuth 2.0	My account data and interactions remain secure and identity-verified
Story 1.2: Non-Profit Credential Verification	Platform Administrator	Submit and verify official non-profit organization credentials before account activation	Unverified public entities are strictly prevented from claiming food donations

Epic 2: Surplus Batch Listing & Expiry Lifecycle

Description: Enable Donor Partners to post surplus food batches with dietary data and automate batch unlisting upon expiration.

User Story	As a...	I want to...	So that...
Story 2.1: Surplus Food Batch Listing	Donor Partner	Post surplus food listings with dietary tags, total quantity, and perishable expiry time	Shelters can view accurate nutritional and volume details.
Story 2.2: Automated Expiry Countdown and Unlisting	Platform System	Track the perishable countdown timer and automatically unlist/flag batches when time reaches zero	Shelters cannot reserve expired or unsafe food. physical recovery phase

Epic 3: Proximity-Based Alerting

Description: Deliver real-time notifications to nearby shelters for urgent, high-quantity perishable food batches.

User Story	As a...	I want to...	So that...
Story 3.1: Proximity Push Notifications	Shelter Coordinator	Receive push notifications within 2.0 seconds when a high-quantity perishable batch (<24h expiry) is posted within a 5 km radius	I can quickly mobilize resources to collect high-volume surplus food before it expires

Epic 4: Food Batch Discovery & Reservation

Description: Enable Shelter Coordinators to browse active listings, select pickup windows, and lock food reservations without double-booking.

User Story	As a...	I want to...	So that...
Story 4.1: Browse Active Claim Board	Shelter Coordinator	Browse active, unexpired food listings with location, tags, and countdown timers	I can identify suitable food donations for my shelter.
Story 4.2: Batch Reservation & Pickup Window Selection	Shelter Coordinator	Reserve an available food batch and choose a designated pickup time window	The pickup is scheduled smoothly and inventory is allocated to my shelter.
Story 4.3: Concurrency Control & Dynamic State Guard	Shelter Coordinator	Receive immediate error alerts and claim cancellation if another shelter claims or the batch expires during checkout	Double-booking and race conditions are prevented.

Epic 5: Handover Validation & Code Generation

Description: Secure physical food transfer using unique verification codes validated at pickup.

User Story	As a...	I want to...	So that...
Story 5.1: Alphanumeric Verification Code Generation	Shelter Coordinator	Receive a unique alphanumeric pickup code upon confirming a reservation	I have proof of reservation to present during handover.
Story 5.2: Pickup Code Validation & Status Transition	Donor Partner	Enter and validate the shelter's pickup code at handover to transition the batch status to "Picked Up"	Handover is authenticated and completed only with authorized recipients.

Epic 6: Donor Dashboard & Lifecycle Tracking

Description: Provide Donor Partners full visibility into their donation lifecycle and historical metrics.

User Story	As a...	I want to...	So that...
Story 6.1: Real-Time Donation Lifecycle Dashboard	Donor Partner	View real-time lifecycle states of all posted batches (Listed, Reserved, Picked Up, Expired)	I can monitor pickup activity and record metrics for CSR reporting

Deliverables:

1) EPICS AND STORIES CREATED

i)Epic1:

story1.1

The screenshot shows a Jira story card with a dark theme. At the top, it displays 'FOOD-2 / FOOD-8' with a lightning bolt icon and a checkmark icon. To the right, there is a button with an eye icon and the number '1', a share icon, and a more options icon. The main title of the story is 'Story 1.1: OAuth 2.0 Account Authentication'. Below the title, there is a row of buttons: 'Done' (highlighted in green), a code icon, a lightning bolt icon, 'Improve Story' (with a star icon), an ellipsis, and a plus icon. Underneath this row is a section titled 'Description' with a downward arrow. The description contains three bullet points: 'As a: Platform User (Donor Partner / Shelter Coordinator)', 'I want to: Authenticate securely using OAuth 2.0', and 'So that: My account data and interactions remain secure and identity-verified.'

2)SPRINT, BURNOUT, AND SUMMARY:

DURATION 1 WEEK:

DURATION 2 WEEKS :

4)COMMENTS AFTER SPRINTS FOR EPICS:

Epic1:

 **Rishi Bharadwaj**
now

Sprint 1 simulation completed successfully. All child stories —Story 1.1 (OAuth 2.0 Account Authentication, 3 SP) and Story 1.2 (Non-Profit Credential Verification, 5 SP)—have been moved to Done, burning a total of 8 Story Points. Acceptance criteria verified: unauthorized public users and unverified non-profit entities are strictly restricted from accessing the active claim board. Role-based authentication is functional, providing secure identity validation for downstream reservation workflows

Epic 2:

 **Rishi Bharadwaj** 
now

All deliverables for Sprint 1 have been completed. Story 2.1 (Surplus Food Batch Listing, 5 SP) and Story 2.2 (Automated Expiry Countdown and Unlisting, 3 SP) are marked as Done (8 Story Points burned). Acceptance criteria verified: Donor Partners can publish batches with mandatory dietary tags, quantities, and perishable expiration timers. Automated system guards trigger immediate batch unlisting once countdown timers hit zero, preventing unsafe food claims and unblocking Epic 4 (Food Discovery & Reservation).

    

Group Reflection: Agile Workflow & Sprint Simulation

“ Translating the food redistribution platform requirements into structured Epics and User Stories established clear functional boundaries between Donor Partners and Shelter Coordinators while keeping acceptance criteria testable. Utilizing the Fibonacci sequence during Planning Poker effectively separated low-effort tasks from complex, latency-critical features like proximity-based alerting. Progressing stories across the active Scrum board from To Do to In Progress to Done simulated the core operational flow from food listing to handover verification, underscoring critical dependencies between expiry tracking and reservation locking. Finally, analyzing the sprint burndown chart revealed how batch-completing tasks produces steep drops rather than a steady trajectory, emphasizing the necessity of continuous task updates and finalizing all story estimations prior to sprint activation to avoid scope-change warnings. ”
